COVID-19 WEEKLY UPDATE

Week of April 19, 2021

More to Know:

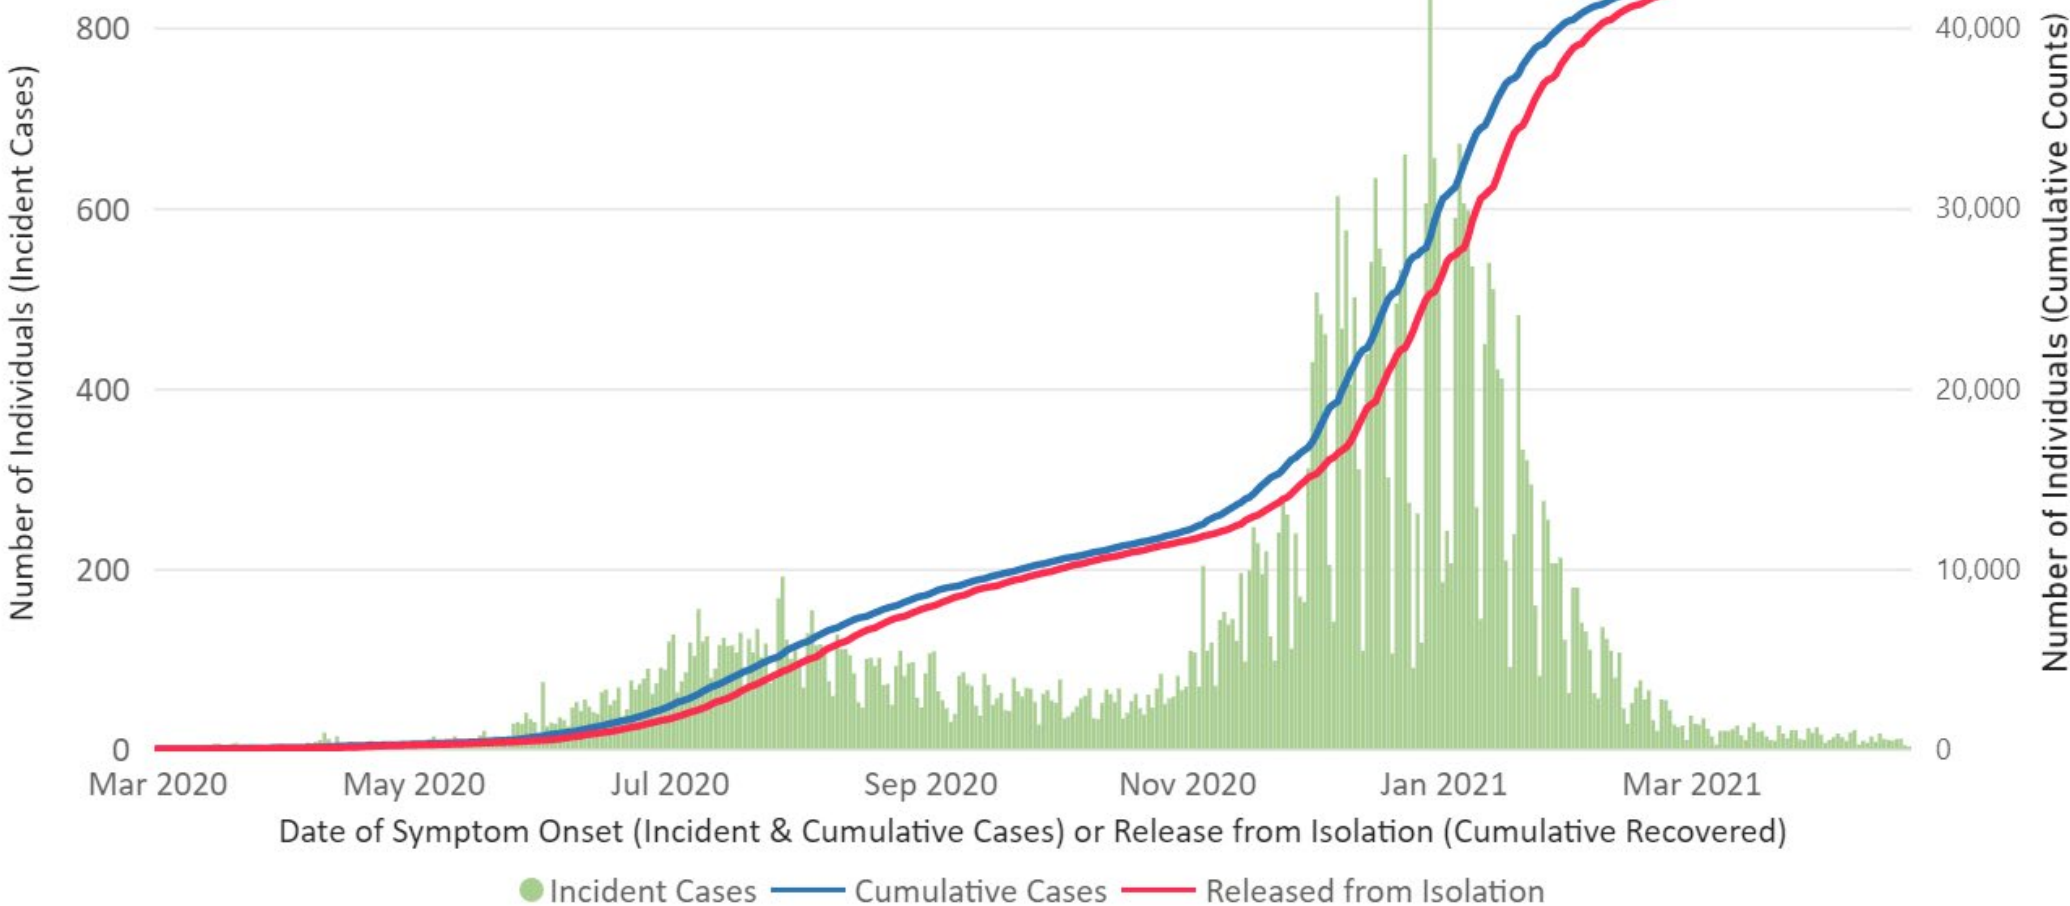

1. The use of the Johnson and Johnson vaccine remains on pause. Local vaccination efforts continue with Pfizer and Moderna vaccine.
2. Although more people are getting vaccinated each day, COVID-19 is still spreading locally. That is why testing remains critical. Testing serves as an early warning system for possible rising case counts, allows for quick isolation of people who are infectious, and detects new variants of the virus.
3. The Monterey County Public Health Lab continues its work detecting COVID-19 variants locally. These variants are more transmissible and can increase disease severity. The lab has detected the "West Coast," "U.K" and "South Africa" variants.
